1 Editorial

Guten Morgen,

willkommen zum Cybersecurity Morgenreport von Cyberwald, Ihrem täglichen Begleiter in der Welt der IT-Sicherheit. Als nicht-kommerzielles Projekt ist es unser Anliegen, Awareness und Wissen rund um das Thema Cybersecurity kostenlos zu vermitteln. In der heutigen digitalen Welt ist es für Unternehmen von entscheidender Bedeutung, sich über aktuelle Sicherheitsrisiken zeitnah zu informieren. Cyberbedrohungen entwickeln sich ständig weiter und können erhebliche Schäden verursachen, wenn sie nicht rechtzeitig erkannt und abgewehrt werden. Durch die Nutzung aktueller Informationen können Unternehmen ihre IT-Sicherheitsmaßnahmen stärken und sich effektiv gegen diese Bedrohungen schützen.

Unser Ziel ist es, Ihnen, den IT-Verantwortlichen, einen kompakten und leicht verständlichen Überblick über aktuelle Sicherheitsrisiken zu geben. Wir präsentieren Ihnen täglich Sicherheitsmeldungen und Berichte über neue Sicherheitslücken, die Ihre Systeme und Daten bedrohen könnten.

Darüber hinaus listen wir aktuelle Cyberangriffe und Ransomware-Vorfälle auf. Dies ist von besonderer Bedeutung, da es Unternehmen ermöglicht, sich auf mögliche Supply-Chain- und Phishing-Angriffe vorzubereiten. Durch das Verständnis der Methoden und Taktiken, die von Cyberkriminellen verwendet werden, können Unternehmen ihre Verteidigungsmaßnahmen entsprechend anpassen und stärken.

Für den Cybersecurity Morgenreport greifen wir automatisiert auf öffentliche Informationsquellen zu, filtern und sortieren diese Informationen, um sie Ihnen in einer übersichtlichen Form zur Verfügung zu stellen. Wir bemühen uns, die Inhalte so verständlich wie möglich zu gestalten und vorzugsweise vollständig in deutscher Sprache wiederzugeben. Bei Bedarf übersetzen wir die öffentlichen Informationen und fassen sie durch eine KI zusammen.

Der Cybersecurity Morgenreport ist ein dynamisches Projekt. Wir passen und erweitern unsere Inhalte ständig, um Ihnen die relevantesten und aktuellsten Informationen zu liefern. Derzeit befinden wir uns im Alpha-Stadium des Projekts und freuen uns über Ihr Feedback und Ihre Anregungen.

Wir hoffen, dass der Cybersecurity Morgenreport Ihnen hilft, Ihre IT-Sicherheitsmaßnahmen zu verbessern und Ihre Systeme vor den ständig wechselnden Bedrohungen zu schützen. Bleiben Sie sicher und informiert mit dem Cybersecurity Morgenreport von Cyberwald.

Ihr Cyberwald-Team

2 Security-News

2.1 Heise - Security-Alert

Neue SugarCRM-Versionen schließen kritische Lücken

Insgesamt 18, teils kritische Lücken schließen die neuen Versionen SugarCRM 13.03. und 12.05.

- [Link](#)

Google Chrome: Kritische Schwachstelle bedroht Browser-Nutzer

In Chrome haben Googles Entwickler sieben Sicherheitslücken abgedichtet. Mindestens eine davon stellt ein kritisches Risiko dar.

- [Link](#)

Loadbalancer: Sicherheitslücken in Loadmaster von Progress/Kemp

In der Loadbalancer-Software Loadmaster von Progress/Kemp klaffen Sicherheitslücken, durch die Angreifer etwa Befehle einschleusen können.

- [Link](#)

Sicherheitslücken in Microsofts WiX-Installer-Toolset gestopft

Das quelloffene WiX-Installer-Toolset von Microsoft hat zwei Sicherheitslücken. Die dichten aktualisierte Versionen ab.

- [Link](#)

Firefox: Notfall-Update schließt kritische Sicherheitslücken

Die Mozilla-Entwickler haben zwei kritische Sicherheitslücken mit dem Update auf Firefox 124.0.1 und Firefox ESR 115.9.1 geschlossen.

- [Link](#)

Kritische Sicherheitslücke in FortiClientEMS wird angegriffen

Eine kritische Schwachstelle in FortiClientEMS wird inzwischen aktiv angegriffen. Zudem ist ein Proof-of-Concept-Exploit öffentlich geworden.

- [Link](#)

Microsoft schließt Sicherheitslücke in Xbox-Gaming-Dienst – nach Hickhack

Microsoft hat ein Sicherheitsleck im Xbox Gaming Service abgedichtet. Dem ging jedoch eine Diskussion voraus.

- [Link](#)

IBM-Software: Angreifer können Systeme mit Schadcode kompromittieren

Es sind wichtige Sicherheitsupdates für IBM App Connect Enterprise und InfoSphere Information Server erschienen.

- [Link](#)

—

Lücken in Ruby-Gems ermöglichen Codeschmuggel und Datenleck

Angreifer könnten eigenen Code im Kontext eines Ruby-Programms ausführen. Nutzer der RDoc- und StringIO-Gems sollten aktualisierte Versionen einspielen.

- [Link](#)

—

Attacken auf Ivanti Standalone Sentry und Neurons möglich

Angreifer können an kritische Sicherheitslücken in Ivanti-Software ansetzen. Sicherheitsupdates sind verfügbar.

- [Link](#)

3 Sicherheitslücken

Eine Sicherheitslücke oder Schwachstelle ist ein Fehler in einer Software oder Hardware, der es einem Angreifer ermöglicht, in ein Computersystem einzudringen und Schaden anzurichten. Diese Lücke stellt eine Bedrohung für die Sicherheit des Systems dar, da sie ausgenutzt werden kann, um das System zu kompromittieren. Sicherheitslücken entstehen oft durch unzureichenden Schutz des Computers vor Netzwerkangriffen, zum Beispiel durch fehlende Firewall oder andere Sicherheitssoftware. Auch Programmierfehler im Betriebssystem, Webbrowser oder anderen Anwendungen können Sicherheitslücken verursachen. Bekannte Sicherheitslücken sollten daher so schnell wie möglich durch das Einspielen eines Patches geschlossen werden, um die Angriffsfläche der IT-Systeme zu verringern.

3.1 EPSS

Das Exploit Prediction Scoring System wird für eine bekannte Software-Sicherheitslücke / CVE auf einer Skala von 0 (0%) bis 1 (100%) angegeben und soll die Wahrscheinlichkeit für das Auftreten eines Exploits in naher Zukunft darstellen. Ein höherer Wert bedeutet eine höhere Wahrscheinlichkeit, dass eine Schwachstelle in naher Zukunft ausgenutzt wird. EPSS kann auch als Rahmen für die Priorisierung von Schwachstellen unter Verwendung einer Kombination von Metriken betrachtet werden.

Es soll Unternehmen dabei helfen, ihre Ressourcen effizienter zu verteilen und alle relevanten Cyber-Risiken zu minimieren.

3.1.1 CVEs mit hoher Exploit-Wahrscheinlichkeit

| CVE | EPSS | Perzentil | weitere Informationen |
|----------------|-------------|-------------|-----------------------|
| CVE-2023-6895 | 0.901600000 | 0.987320000 | Link |

Thu, 28 Mar 2024

[NEU] [UNGEPATCHT] [hoch] util-linux: Schwachstelle ermöglicht Umgehen von Sicherheitsvorkehrungen

Ein lokaler Angreifer kann eine Schwachstelle in util-linux ausnutzen, um Sicherheitsvorkehrungen zu umgehen.

- [Link](#)

—

Thu, 28 Mar 2024

[NEU] [hoch] GitLab: Mehrere Schwachstellen

Ein entfernter, authentisierter Angreifer kann mehrere Schwachstellen in GitLab ausnutzen, um einen Cross-Site Scripting Angriff durchzuführen oder einen Denial-of-Service-Zustand zu verursachen.

- [Link](#)

—

Thu, 28 Mar 2024

[NEU] [hoch] Splunk Splunk Enterprise: Mehrere Schwachstellen

Ein entfernter, authentisierter Angreifer kann mehrere Schwachstellen in Splunk Splunk Enterprise ausnutzen, um Informationen offenzulegen oder um Sicherheitsmaßnahmen zu umgehen.

- [Link](#)

—

Thu, 28 Mar 2024

[UPDATE] [hoch] TLS: Mehrere Schwachstellen ermöglichen Umgehen von Sicherheitsvorkehrungen

Ein entfernter, anonymer Angreifer kann mehrere Schwachstellen in TLS 1.2 ausnutzen, um Sicherheitsvorkehrungen zu umgehen.

- [Link](#)

—

Thu, 28 Mar 2024

[UPDATE] [hoch] python-cryptography: Schwachstelle ermöglicht Umgehen von Sicherheitsvorkehrungen

Ein entfernter, anonymer Angreifer kann eine Schwachstelle in python-cryptography ausnutzen, um Sicherheitsvorkehrungen zu umgehen.

- [Link](#)

—

Thu, 28 Mar 2024

[UPDATE] [hoch] dnsmasq: Schwachstelle ermöglicht nicht spezifizierten Angriff

Ein entfernter, anonymer Angreifer kann eine Schwachstelle in dnsmasq ausnutzen, um einen nicht näher spezifizierten Angriff durchzuführen.

- [Link](#)

—

Thu, 28 Mar 2024

[UPDATE] [hoch] Python: Schwachstelle ermöglicht Codeausführung

Ein entfernter, anonymer Angreifer kann eine Schwachstelle in Python ausnutzen, um beliebigen Programmcode auszuführen.

- [Link](#)

—

Thu, 28 Mar 2024

[UPDATE] [hoch] Python: Mehrere Schwachstellen

Ein Angreifer kann mehrere Schwachstellen in Python ausnutzen, um einen Denial of Service Angriff durchzuführen und Sicherheitsmaßnahmen zu umgehen.

- [Link](#)

—

Thu, 28 Mar 2024

[UPDATE] [hoch] libxml2: Mehrere Schwachstellen ermöglichen nicht spezifizierten Angriff

Ein Angreifer kann mehrere Schwachstellen in libxml2 ausnutzen, um einen nicht näher spezifizierten Angriff durchzuführen.

- [Link](#)

—

Thu, 28 Mar 2024

[UPDATE] [hoch] Python: Mehrere Schwachstellen

Ein Angreifer kann mehrere Schwachstellen in Python ausnutzen, um einen Denial-of-Service-Zustand herbeizuführen, Sicherheitsmaßnahmen zu umgehen, Dateien zu manipulieren oder vertrauliche Informationen offenzulegen.

4 Aktiv ausgenutzte Sicherheitslücken

4.1 Exploits der letzten 5 Tage

“Fri, 29 Mar 2024

WatchGuard XTM Firebox Unauthenticated Remote Command Execution

This Metasploit module exploits a buffer overflow at the administration interface (8080 or 4117) of WatchGuard Firebox and XTM appliances which is built from a cherrypy python backend sending XML-RPC requests to a C binary called wgagent using pre-authentication endpoint /agent/login. This vulnerability impacts Fireware OS before 12.7.2_U2, 12.x before 12.1.3_U8, and 12.2.x through 12.5.x before 12.5.9_U2. Successful exploitation results in remote code execution as user nobody.

util-linux wall Escape Sequence Injection

The util-linux wall command does not filter escape sequences from command line arguments. The vulnerable code was introduced in commit cdd3cc7fa4 (2013). Every version since has been vulnerable. This allows unprivileged users to put arbitrary text on other users terminals, if mesg is set to y and wall is setgid. CentOS is not vulnerable since wall is not setgid. On Ubuntu 22.04 and Debian Bookworm, wall is both setgid and mesg is set to y by default.

Circontrol Raption Buffer Overflow / Command Injection

The server in Circontrol Raption versions through 5.11.2 has a pre-authentication stack-based buffer overflow that can be exploited to gain run-time control of the device as root. The pwrstudio web application of EV Charger (in the server in Circontrol Raption through 5.6.2) is vulnerable to OS command injection.

Sharepoint Dynamic Proxy Generator Remote Command Execution

This Metasploit module exploits two vulnerabilities in Sharepoint 2019 - an authentication bypass as noted in CVE-2023-29357 which was patched in June of 2023 and CVE-2023-24955 which was a remote command execution vulnerability patched in May of 2023. The authentication bypass allows attackers to impersonate the Sharepoint Admin user. This vulnerability stems from the signature validation check used to verify JSON Web Tokens (JWTs) used for OAuth authentication. If the signing algorithm of the user-provided JWT is set to none, SharePoint skips the signature validation step due to a logic flaw in the ReadTokenCore() method. After impersonating the administrator user, the attacker has access to the Sharepoint API and is able to exploit CVE-2023-24955. This authenticated remote command execution vulnerability leverages the impersonated privileged account to replace the /BusinessDataMetadacatalog/BDCMetadata.bdcx file in the webroot directory with a payload. The payload is then compiled and executed by Sharepoint allowing attackers to remotely execute commands via the API.

WordPress Bricks Builder Theme 1.9.6 Remote Code Execution

This Metasploit module exploits an unauthenticated remote code execution vulnerability in the Bricks Builder Theme versions 1.9.6 and below for WordPress. The vulnerability allows attackers to execute arbitrary PHP code by leveraging a nonce leakage to bypass authentication and exploit the eval() function usage within the theme. Successful exploitation allows for full control of the affected WordPress site. It is recommended to upgrade to version 1.9.6.1 or higher.

Artica Proxy Unauthenticated PHP Deserialization

A command injection vulnerability in Artica Proxy appliance versions 4.50 and 4.40 allows remote attackers to run arbitrary commands via an unauthenticated HTTP request. The Artica Proxy administrative web application will deserialize arbitrary PHP objects supplied by unauthenticated users and subsequently enable code execution as the www-data user.
