1 Editorial

Guten Morgen,

willkommen zum Cybersecurity Morgenreport von Cyberwald, Ihrem täglichen Begleiter in der Welt der IT-Sicherheit. Als nicht-kommerzielles Projekt ist es unser Anliegen, Awareness und Wissen rund um das Thema Cybersecurity kostenlos zu vermitteln. In der heutigen digitalen Welt ist es für Unternehmen von entscheidender Bedeutung, sich über aktuelle Sicherheitsrisiken zeitnah zu informieren. Cyberbedrohungen entwickeln sich ständig weiter und können erhebliche Schäden verursachen, wenn sie nicht rechtzeitig erkannt und abgewehrt werden. Durch die Nutzung aktueller Informationen können Unternehmen ihre IT-Sicherheitsmaßnahmen stärken und sich effektiv gegen diese Bedrohungen schützen.

Unser Ziel ist es, Ihnen, den IT-Verantwortlichen, einen kompakten und leicht verständlichen Überblick über aktuelle Sicherheitsrisiken zu geben. Wir präsentieren Ihnen täglich Sicherheitsmeldungen und Berichte über neue Sicherheitslücken, die Ihre Systeme und Daten bedrohen könnten.

Darüber hinaus listen wir aktuelle Cyberangriffe und Ransomware-Vorfälle auf. Dies ist von besonderer Bedeutung, da es Unternehmen ermöglicht, sich auf mögliche Supply-Chain- und Phishing-Angriffe vorzubereiten. Durch das Verständnis der Methoden und Taktiken, die von Cyberkriminellen verwendet werden, können Unternehmen ihre Verteidigungsmaßnahmen entsprechend anpassen und stärken.

Für den Cybersecurity Morgenreport greifen wir automatisiert auf öffentliche Informationsquellen zu, filtern und sortieren diese Informationen, um sie Ihnen in einer übersichtlichen Form zur Verfügung zu stellen. Wir bemühen uns, die Inhalte so verständlich wie möglich zu gestalten und vorzugsweise vollständig in deutscher Sprache wiederzugeben. Bei Bedarf übersetzen wir die öffentlichen Informationen und fassen sie durch eine KI zusammen.

Der Cybersecurity Morgenreport ist ein dynamisches Projekt. Wir passen und erweitern unsere Inhalte ständig, um Ihnen die relevantesten und aktuellsten Informationen zu liefern. Derzeit befinden wir uns im Alpha-Stadium des Projekts und freuen uns über Ihr Feedback und Ihre Anregungen.

Wir hoffen, dass der Cybersecurity Morgenreport Ihnen hilft, Ihre IT-Sicherheitsmaßnahmen zu verbessern und Ihre Systeme vor den ständig wechselnden Bedrohungen zu schützen. Bleiben Sie sicher und informiert mit dem Cybersecurity Morgenreport von Cyberwald.

Ihr Cyberwald-Team

2 Security-News

2.1 Heise - Security-Alert

Qnap schließt NAS-Sicherheitslücken aus Hacker-Wettbewerb Pwn2Own

NAS-Modelle von Qnap sind verwundbar. Nun hat der Hersteller Sicherheitsupdates für das Betriebssystem und Apps veröffentlicht.

- Link

_

Sicherheitsupdates: Angreifer können GitLab-Accounts übernehmen

Wichtige Sicherheitsupdates schließen mehrere Sicherheitslücken in GitLab. Der Anbieter rät zu einem zügigen Update.

- Link

_

Cross-Site Scripting: Sicherheitslücken in pfSense ermöglichen Admin-Cookieklau

Die Open-Source-Firewall pfSense hat mehrere Löcher, durch die Angreifer eigenen Javascript-Code einschleusen können. Updates sind verfügbar.

- Link

_

Cisco: Angreifer plazieren mithilfe neuer O-Day-Lücke Hintertüren auf Firewalls

Zwei geschickt gestaltete Hintertüren auf Geräten mit Ciscos ASA- und FTD-System überleben Reboots und Systemupdates. Viele Details sind noch unklar.

- Link

_

AMD Radeon-Grafiktreiber: Update schließt Codeschmuggel-Lücke

AMD hat Updates für Radeon-Grafiktreiber für DirectX 11 veröffentlicht. Sie schließen Sicherheitslücken, durch die Angreifer Schadcode einschleusen können.

- Link

_

Jetzt patchen! Attacken auf Dateiübertragungsserver CrushFTP beobachtet

Angreifer haben Zugriff auf Systemdaten von CrushFTP-Servern. Verwundbare Systeme gibt es auch in Deutschland.

- Link

_

FIDO2-Sticks: Lücke in Yubikey-Verwaltungssoftware erlaubt Rechteausweitung

Um die FIDO2-Sticks von Yubikey zu verwalten, stellt der Hersteller eine Software bereit. Eine Lücke darin ermöglicht die Ausweitung der Rechte.

—

Mitel SIP-Phones anfällig für unbefugte Zugriffe

Mitel-SIP-Phones und -Konferenz-Produkte ermöglichen unbefugte Zugriffe und das Ausführen von Schadcode. Updates stehen bereit.

- Link

—

Update für Solarwinds FTP-Server Serv-U schließt Lücke mit hohem Risiko

Im Solarwinds Serv-U-FTP-Server klafft eine als hohes Risiko eingestufte Sicherheitslücke. Der Hersteller dichtet sie mit einem Update ab.

- Link

_

Jetzt patchen! Root-Attacken auf Cisco IMC können bevorstehen

Es sind wichtige Sicherheitsupdates für Cisco Integrated Management Controller und IOS erschienen. Exploitcode ist in Umlauf.

- Link

_

3 Sicherheitslücken

Eine Sicherheitslücke oder Schwachstelle ist ein Fehler in einer Software oder Hardware, der es einem Angreifer ermöglicht, in ein Computersystem einzudringen und Schaden anzurichten. Diese Lücke stellt eine Bedrohung für die Sicherheit des Systems dar, da sie ausgenutzt werden kann, um das System zu kompromittieren. Sicherheitslücken entstehen oft durch unzureichenden Schutz des Computers vor Netzwerkangriffen, zum Beispiel durch fehlende Firewall oder andere Sicherheitssoftware. Auch Programmierfehler im Betriebssystem, Webbrowser oder anderen Anwendungen können Sicherheitslücken verursachen. Bekannte Sicherheitslücken sollten daher so schnell wie möglich durch das Einspielen eines Patches geschlossen werden, um die Angriffsfläche der IT-Systeme zu verringern.

3.1 EPSS

Das Exploit Prediction Scoring System wird für eine bekannte Software-Sicherheitslücke / CVE auf einer Skala von 0 (0%) bis 1 (100%) angegeben und soll die Wahrscheinlichkeit für das Auftreten eines Exploits in naher Zukunft darstellen. Ein höherer Wert bedeutet eine höhere Wahrscheinlichkeit, dass eine Schwachstelle in naher Zukunft ausgenutzt wird. EPSS kann auch als Rahmen für die Priorisierung von Schwachstellen unter Verwendung einer Kombination von Metriken betrachtet werden.

Es soll Unternehmen dabei helfen, ihre Ressourcen effizienter zu verteilen und alle relevanten Cyber-Risiken zu minimieren.

3.1.1 CVEs mit hoher Exploit-Wahrscheinlichkeit

Apache Solr Backup/Restore API Remote Code Execution

Apache Solr versions 6.0.0 through 8.11.2 and versions 9.0.0 up to 9.4.1 are affected by an unrestricted file upload vulnerability which can result in remote code execution in the context of the user running Apache Solr. When Apache Solr creates a Collection, it will use a specific directory as the classpath and load some classes from it. The backup function of the Collection can export malicious class files uploaded by attackers to the directory, allowing Solr to load custom classes and create arbitrary Java code. Execution can further bypass the Java sandbox configured by Solr, ultimately causing arbitrary command execution.

FortiNet FortiClient EMS 7.2.2 / 7.0.10 SQL Injection / Remote Code Execution

A remote SQL injection vulnerability exists in FortiNet FortiClient EMS (Endpoint Management Server) versions 7.2.0 through 7.2.2 and 7.0.1 through 7.0.10. FortiClient EMS serves as an endpoint management solution tailored for enterprises, offering a centralized platform for overseeing enrolled endpoints. The SQL injection vulnerability is due to user controller strings which can be sent directly into database queries. FcmDaemon.exe is the main service responsible for communicating with enrolled clients. By default it listens on port 8013 and communicates with FCTDas.exe which is

responsible for translating requests and sending them to the database. In the message header of a specific request sent between the two services, the FCTUID parameter is vulnerable to SQL injection. It can be used to enable the xp_cmdshell which can then be used to obtain unauthenticated remote code execution in the context of NT AUTHORITY\SYSTEM. Upgrading to either 7.2.3, 7.0.11 or above is recommended by FortiNet. It should be noted that in order to be vulnerable, at least one endpoint needs to be enrolled / managed by FortiClient EMS for the necessary vulnerable services to be available.

_

Gambio Online Webshop 4.9.2.0 Remote Code Execution

A remote code execution vulnerability in Gambio online webshop versions 4.9.2.0 and below allows remote attackers to run arbitrary commands via an unauthenticated HTTP POST request. The identified vulnerability within Gambio pertains to an insecure deserialization flaw, which ultimately allows an attacker to execute remote code on affected systems. The insecure deserialization vulnerability in Gambio poses a significant risk to affected systems. As it allows remote code execution, adversaries could exploit this flaw to execute arbitrary commands, potentially resulting in complete system compromise, data exfiltration, or unauthorized access to sensitive information.

Palo Alto Networks PAN-OS Unauthenticated Remote Code Execution

This Metasploit module exploits two vulnerabilities in Palo Alto Networks PAN-OS that allow an unauthenticated attacker to create arbitrarily named files and execute shell commands. Configuration

[&]quot; "Tue, 23 Apr 2024

requirements are PAN-OS with GlobalProtect Gateway or GlobalProtect Portal enabled and telemetry collection on (default). Multiple versions are affected. Payloads may take up to one hour to execute, depending on how often the telemetry service is set to run.

Elber Wayber Analog/Digital Audio STL 4.00 Insecure Direct Object Reference

Elber Wayber Analog/Digital Audio STL version 4.00 suffers from an unauthenticated device configuration and client-side hidden functionality disclosure vulnerability.

- Link

_

" "Thu, 18 Apr 2024

Elber Wayber Analog/Digital Audio STL 4.00 Authentication Bypass

Elber Wayber Analog/Digital Audio STL version 4.00 suffers from an authentication bypass vulnerability through a direct and unauthorized access to the password management functionality. The issue allows attackers to bypass authentication by manipulating the set_pwd endpoint that enables them to overwrite the password of any user within the system. This grants unauthorized and administrative access to protected areas of the application compromising the device's system security.suffers from a bypass vulnerability.
