1 Editorial

Guten Morgen,

willkommen zum Cybersecurity Morgenreport von Cyberwald, Ihrem täglichen Begleiter in der Welt der IT-Sicherheit. Als nicht-kommerzielles Projekt ist es unser Anliegen, Awareness und Wissen rund um das Thema Cybersecurity kostenlos zu vermitteln. In der heutigen digitalen Welt ist es für Unternehmen von entscheidender Bedeutung, sich über aktuelle Sicherheitsrisiken zeitnah zu informieren. Cyberbedrohungen entwickeln sich ständig weiter und können erhebliche Schäden verursachen, wenn sie nicht rechtzeitig erkannt und abgewehrt werden. Durch die Nutzung aktueller Informationen können Unternehmen ihre IT-Sicherheitsmaßnahmen stärken und sich effektiv gegen diese Bedrohungen schützen.

Unser Ziel ist es, Ihnen, den IT-Verantwortlichen, einen kompakten und leicht verständlichen Überblick über aktuelle Sicherheitsrisiken zu geben. Wir präsentieren Ihnen täglich Sicherheitsmeldungen und Berichte über neue Sicherheitslücken, die Ihre Systeme und Daten bedrohen könnten.

Darüber hinaus listen wir aktuelle Cyberangriffe und Ransomware-Vorfälle auf. Dies ist von besonderer Bedeutung, da es Unternehmen ermöglicht, sich auf mögliche Supply-Chain- und Phishing-Angriffe vorzubereiten. Durch das Verständnis der Methoden und Taktiken, die von Cyberkriminellen verwendet werden, können Unternehmen ihre Verteidigungsmaßnahmen entsprechend anpassen und stärken.

Für den Cybersecurity Morgenreport greifen wir automatisiert auf öffentliche Informationsquellen zu, filtern und sortieren diese Informationen, um sie Ihnen in einer übersichtlichen Form zur Verfügung zu stellen. Wir bemühen uns, die Inhalte so verständlich wie möglich zu gestalten und vorzugsweise vollständig in deutscher Sprache wiederzugeben. Bei Bedarf übersetzen wir die öffentlichen Informationen und fassen sie durch eine KI zusammen.

Der Cybersecurity Morgenreport ist ein dynamisches Projekt. Wir passen und erweitern unsere Inhalte ständig, um Ihnen die relevantesten und aktuellsten Informationen zu liefern. Derzeit befinden wir uns im Alpha-Stadium des Projekts und freuen uns über Ihr Feedback und Ihre Anregungen.

Wir hoffen, dass der Cybersecurity Morgenreport Ihnen hilft, Ihre IT-Sicherheitsmaßnahmen zu verbessern und Ihre Systeme vor den ständig wechselnden Bedrohungen zu schützen. Bleiben Sie sicher und informiert mit dem Cybersecurity Morgenreport von Cyberwald.

Ihr Cyberwald-Team

2 Security-News

2.1 Heise - Security-Alert

Linux: root-Lücke wird aktiv missbraucht

Die IT-Sicherheitsbehörde CISA warnt vor aktiven Angriffen auf eine Linux-Lücke. Angreifer verschaffen sich damit root-Rechte.

- Link

_

IT-Monitoring: Checkmk schließt Lücke, die Änderung von Dateien ermöglicht

Eine Sicherheitslücke in der Monitoring-Software Checkmk ermöglicht Angreifern, unbefugt lokale Dateien auf dem Checkmk-Server zu lesen und zu schreiben.

- Link

_

Notfallpatch: Angreifer attackieren VPN-Verbindungen von Checkpoint Gateways

Checkpoint hat ein Notfall-Sicherheitsupdate veröffentlicht. Derzeit haben Angreifer Network Security Gateways wie Quantum Maestro im Visier.

- Link

_

Foxit PDF Reader: Halbherzige Zertifikatprüfung ermöglicht Rechteausweitung

Die Update-Routinen vom Foxit PDF Reader prüfen Zertifikate nicht richtig. Angreifer können dadurch ihre Rechte ausweiten.

- Link

_

Proof-of-Concept-Exploits für kritische FortiSIEM-Lücken: Jetzt patchen!

IT-Sicherheitsforscher haben für kritische Sicherheitslücken in FortiSIEM Proof-of-Concept-Exploits veröffentlicht. Höchste Zeit, die Updates zu installieren.

- Link

_

Supportende: Rechte-Sicherheitslücke gefährdet Ivanti Endpoint Manager 2021

Angreifer können Schadcode mit erhöhten Rechten ausführen. Admins müssen Ivanti EPM auf eine noch unterstützte Version upgraden.

- Link

_

Kritische Sicherheitslücke gewährt Angreifern Zugriff auf TP-Link-Router C5400X

Der TP-Link-WLAN-Router C5400X ist verwundbar. Ein Sicherheitspatch schließt eine kritische Schwachstelle.

- Link

_

Windows Server 2019: Aktualisiertes Sicherheitsupdate behebt Installationsfehler

Das Sicherheitsupdate für Windows Server 2019 schlug mit den Fehlernummern 0x800f0982 und 0x80004005 fehl. Ein aktualisiertes Update ist verfügbar.

- Link

_

GitLab: Accountübernahme nach 1-Klick-Attacke möglich

Mehrere Sicherheitslücken in GitLab gefährden Systeme. Gegen mögliche Attacken gerüstete Versionen stehen zum Download bereit.

- Link

_

Google Chrome: Vierte bereits missbrauchte Zero-Day-Lücke in zwei Wochen

Google schließt eine Zero-Day-Lücke im Chrome-Webbrowser, die bereits angegriffen wird. Die vierte in zwei Wochen.

- Link

_

3 Sicherheitslücken

Eine Sicherheitslücke oder Schwachstelle ist ein Fehler in einer Software oder Hardware, der es einem Angreifer ermöglicht, in ein Computersystem einzudringen und Schaden anzurichten. Diese Lücke stellt eine Bedrohung für die Sicherheit des Systems dar, da sie ausgenutzt werden kann, um das System zu kompromittieren. Sicherheitslücken entstehen oft durch unzureichenden Schutz des Computers vor Netzwerkangriffen, zum Beispiel durch fehlende Firewall oder andere Sicherheitssoftware. Auch Programmierfehler im Betriebssystem, Webbrowser oder anderen Anwendungen können Sicherheitslücken verursachen. Bekannte Sicherheitslücken sollten daher so schnell wie möglich durch das Einspielen eines Patches geschlossen werden, um die Angriffsfläche der IT-Systeme zu verringern.

3.1 EPSS

Das Exploit Prediction Scoring System wird für eine bekannte Software-Sicherheitslücke / CVE auf einer Skala von 0 (0%) bis 1 (100%) angegeben und soll die Wahrscheinlichkeit für das Auftreten eines Exploits in naher Zukunft darstellen. Ein höherer Wert bedeutet eine höhere Wahrscheinlichkeit, dass eine Schwachstelle in naher Zukunft ausgenutzt wird. EPSS kann auch als Rahmen für die Priorisierung von Schwachstellen unter Verwendung einer Kombination von Metriken betrachtet werden.

Es soll Unternehmen dabei helfen, ihre Ressourcen effizienter zu verteilen und alle relevanten Cyber-Risiken zu minimieren.

3.1.1 CVEs mit hoher Exploit-Wahrscheinlichkeit

iMLog Cross Site Scripting

iMLog versions prior to 1.307 suffer from a persistent cross site scripting vulnerability.

- Link

_

Check Point Security Gateway Information Disclosure

Check Point Security Gateway suffers from an information disclosure vulnerability. Versions affected include R77.20 (EOL), R77.30 (EOL), R80.10 (EOL), R80.20 (EOL), R80.20.x, R80.20SP (EOL), R80.30 (EOL), R80.30SP (EOL), R80.40 (EOL), R81, R81.10, R81.10.x, and R81.20.

- Link

—

Aquatronica Control System 5.1.6 Password Disclosure

Aquatronica Control System version 5.1.6 has a tcp.php endpoint on the controller that is exposed to unauthenticated attackers over the network. This vulnerability allows remote attackers to send a POST request which can reveal sensitive configuration information, including plaintext passwords. This can lead to unauthorized access and control over the aquarium controller, compromising its security and potentially allowing attackers to manipulate its settings.

_

Progress Flowmon 12.3.5 Local sudo Privilege Escalation

This Metasploit module abuses a feature of the sudo command on Progress Flowmon. Certain binary

[&]quot; "Fri, 31 May 2024

[&]quot; "Thu, 30 May 2024

[&]quot; "Thu, 30 May 2024

files are allowed to automatically elevate with the sudo command. This is based off of the file name. This includes executing a PHP command with a specific file name. If the file is overwritten with PHP code it can be used to elevate privileges to root. Progress Flowmon up to at least version 12.3.5 is vulnerable.

- Link

_

Akaunting 3.1.8 Client-Side Template Injection

Akaunting version 3.1.8 suffers from a client-side template injection vulnerability.

- Link

_

Akaunting 3.1.8 Server-Side Template Injection

Akaunting version 3.1.8 suffers from a server-side template injection vulnerability.

NorthStar C2 Cross Site Scripting / Code Execution

NorthStar C2, prior to commit 7674a44 on March 11 2024, contains a vulnerability where the logs page is vulnerable to a stored cross site scripting issue. An unauthenticated user can simulate an agent registration to cause the cross site scripting attack and take over a users session. With this access, it is then possible to run a new payload on all of the NorthStar C2 compromised hosts (agents), and kill the original agent. Successfully tested against NorthStar C2 commit e7fdce148b6a81516e8aa5e5e037acd082611f73 running on Ubuntu 22.04. The agent was running on Windows 10 19045.

- Link

—

" "Wed, 22 May 2024

AVideo WWBNIndex Plugin Unauthenticated Remote Code Execution

This Metasploit module exploits an unauthenticated remote code execution vulnerability in the WWBNIndex plugin of the AVideo platform. The vulnerability exists within the submitIndex.php file, where user-supplied input is passed directly to the require() function without proper sanitization. By exploiting this, an attacker can leverage the PHP filter chaining technique to execute arbitrary PHP code on the server. This allows for the execution of commands and control over the affected system. The exploit is particularly dangerous because it does not require authentication, making it possible for any remote attacker to exploit this vulnerability.
