#### 1 Editorial

Guten Morgen,

willkommen zum Cybersecurity Morgenreport von Cyberwald, Ihrem täglichen Begleiter in der Welt der IT-Sicherheit. Als nicht-kommerzielles Projekt ist es unser Anliegen, Awareness und Wissen rund um das Thema Cybersecurity kostenlos zu vermitteln. In der heutigen digitalen Welt ist es für Unternehmen von entscheidender Bedeutung, sich über aktuelle Sicherheitsrisiken zeitnah zu informieren. Cyberbedrohungen entwickeln sich ständig weiter und können erhebliche Schäden verursachen, wenn sie nicht rechtzeitig erkannt und abgewehrt werden. Durch die Nutzung aktueller Informationen können Unternehmen ihre IT-Sicherheitsmaßnahmen stärken und sich effektiv gegen diese Bedrohungen schützen.

Unser Ziel ist es, Ihnen, den IT-Verantwortlichen, einen kompakten und leicht verständlichen Überblick über aktuelle Sicherheitsrisiken zu geben. Wir präsentieren Ihnen täglich Sicherheitsmeldungen und Berichte über neue Sicherheitslücken, die Ihre Systeme und Daten bedrohen könnten.

Darüber hinaus listen wir aktuelle Cyberangriffe und Ransomware-Vorfälle auf. Dies ist von besonderer Bedeutung, da es Unternehmen ermöglicht, sich auf mögliche Supply-Chain- und Phishing-Angriffe vorzubereiten. Durch das Verständnis der Methoden und Taktiken, die von Cyberkriminellen verwendet werden, können Unternehmen ihre Verteidigungsmaßnahmen entsprechend anpassen und stärken.

Für den Cybersecurity Morgenreport greifen wir automatisiert auf öffentliche Informationsquellen zu, filtern und sortieren diese Informationen, um sie Ihnen in einer übersichtlichen Form zur Verfügung zu stellen. Wir bemühen uns, die Inhalte so verständlich wie möglich zu gestalten und vorzugsweise vollständig in deutscher Sprache wiederzugeben. Bei Bedarf übersetzen wir die öffentlichen Informationen und fassen sie durch eine KI zusammen.

Der Cybersecurity Morgenreport ist ein dynamisches Projekt. Wir passen und erweitern unsere Inhalte ständig, um Ihnen die relevantesten und aktuellsten Informationen zu liefern. Derzeit befinden wir uns im Alpha-Stadium des Projekts und freuen uns über Ihr Feedback und Ihre Anregungen.

Wir hoffen, dass der Cybersecurity Morgenreport Ihnen hilft, Ihre IT-Sicherheitsmaßnahmen zu verbessern und Ihre Systeme vor den ständig wechselnden Bedrohungen zu schützen. Bleiben Sie sicher und informiert mit dem Cybersecurity Morgenreport von Cyberwald.

Ihr Cyberwald-Team

### 2 Security-News

#### 2.1 Heise - Security-Alert

#### Fortinet Wireless Manager: Informationen zu kritischer Lücke zurückgehalten

Angreifer konnten Fortinet Wireless Manager attackieren und Admins-Sessions kapern. Das Netzwerkmanagementool war über mehrere Monate verwundbar.

- Link

\_

#### Kritische Lücke in BeyondTrust Privileged Remote Access und Remote Support

In aktuellen Versionen von BeyondTrust Privileged Remote Access und Remote Support haben die Entwickler eine gefährliche Schwachstelle geschlossen.

- Link

#### Windows-Sicherheitslösung Trend Micro Apex One als Einfallstor für Angreifer

Angreifer können an mehreren Sicherheitslücken in Trend Micro Apex One ansetzen. Sicherheitsupdates sind verfügbar.

- Link

\_

#### Jetzt patchen! Angreifer nutzen kritische Sicherheitslücke in Apache Struts aus

Die Uploadfunktion von Apache Struts ist fehlerhaft und Angreifer können Schadcode hochladen. Sicherheitsforscher warnen vor Attacken.

- Link

\_

#### Foxit PDF Editor und Reader: Attacken über präparierte PDF-Dateien möglich

PDF-Anwendungen von Foxit sind unter macOS und Windows verwundbar. Sicherheitsupdates stehen bereit.

- Link

\_

#### CyberPanel: Angreifer können Schadcode einschleusen

In der Server-Verwaltungssoftware CyberPanel wurden zwei Schwachstellen entdeckt. Sie erlauben Angreifern das Einschleusen beliebigen Codes.

- Link

\_

#### DevSecOps-Plattform Gitlab: Accountübernahme möglich

Sicherheitsupdates für Gitlab beugen unter anderem unberechtigte Zugriffe und DoS-Attacken vor.

- Link

#### Sicherheitsupdates: Dell schließt Lücken in PCs, Treibern und Zubehör

Angreifer können mehrere Sicherheitslücken in Dells Hard- und Software ausnutzen. Nun sind Sicherheitspatches erschienen.

- Link

\_

#### Sicherheitspatch: Angreifer können über TeamViewer-Lücke Windows-Dateien löschen

In der aktuellen Version einer Komponente des Fernzugriffsclients TeamViewer für Windows haben die Entwickler eine Schwachstelle geschlossen.

- Link

\_

### Apple stopft schwere Sicherheitslücken, kein Patch für iOS 17

Apples jüngste Updates schließen viele Schwachstellen in iOS, macOS und iPadOS, darunter kritische. Für iOS 17 gibt es wohl keine Patches mehr.

- Link

\_

#### 3 Sicherheitslücken

Eine Sicherheitslücke oder Schwachstelle ist ein Fehler in einer Software oder Hardware, der es einem Angreifer ermöglicht, in ein Computersystem einzudringen und Schaden anzurichten. Diese Lücke stellt eine Bedrohung für die Sicherheit des Systems dar, da sie ausgenutzt werden kann, um das System zu kompromittieren. Sicherheitslücken entstehen oft durch unzureichenden Schutz des Computers vor Netzwerkangriffen, zum Beispiel durch fehlende Firewall oder andere Sicherheitssoftware. Auch Programmierfehler im Betriebssystem, Webbrowser oder anderen Anwendungen können Sicherheitslücken verursachen. Bekannte Sicherheitslücken sollten daher so schnell wie möglich durch das Einspielen eines Patches geschlossen werden, um die Angriffsfläche der IT-Systeme zu verringern.

#### **3.1 EPSS**

Das Exploit Prediction Scoring System wird für eine bekannte Software-Sicherheitslücke / CVE auf einer Skala von 0 (0%) bis 1 (100%) angegeben und soll die Wahrscheinlichkeit für das Auftreten eines Exploits in naher Zukunft darstellen. Ein höherer Wert bedeutet eine höhere Wahrscheinlichkeit, dass eine Schwachstelle in naher Zukunft ausgenutzt wird. EPSS kann auch als Rahmen für die Priorisierung von Schwachstellen unter Verwendung einer Kombination von Metriken betrachtet werden.

Es soll Unternehmen dabei helfen, ihre Ressourcen effizienter zu verteilen und alle relevanten Cyber-Risiken zu minimieren.

### 3.1.1 CVEs mit hoher Exploit-Wahrscheinlichkeit

## 4 Aktiv ausgenutzte Sicherheitslücken

#### 4.1 Exploits der letzten 5 Tage

"Tue, 03 Dec 2024

#### Acronis Cyber Protect/Backup Remote Code Execution

The Acronis Cyber Protect appliance, in its default configuration, allows the anonymous registration of new protect/backup agents on new endpoints. This API endpoint also generates bearer tokens which the agent then uses to authenticate to the appliance. As the management web console is running on the same port as the API for the agents, this bearer token is also valid for any actions on the web console. This allows an attacker with network access to the appliance to start the registration of a new agent, retrieve a bearer token that provides admin access to the available functions in the web console. The web console contains multiple possibilities to execute arbitrary commands on both the agents (e.g., via PreCommands for a backup) and also the appliance (e.g., via a Validation job on the agent of the appliance). These options can easily be set with the provided bearer token, which leads to a complete compromise of all agents and the appliance itself.

#### Fortinet FortiManager Unauthenticated Remote Code Execution

This Metasploit module exploits a missing authentication vulnerability affecting FortiManager and FortiManager Cloud devices to achieve unauthenticated RCE with root privileges. The vulnerable FortiManager versions are 7.6.0, 7.4.0 through 7.4.4, 7.2.0 through 7.2.7, 7.0.0 through 7.0.12, 6.4.0 through 6.4.14, and 6.2.0 through 6.2.12. The vulnerable FortiManager Cloud versions are 7.4.1 through 7.4.4, 7.2.1 through 7.2.7, 7.0.1 through 7.0.12, and 6.4 (all versions).

#### Asterisk AMI Originate Authenticated Remote Code Execution

On Asterisk, prior to versions 18.24.2, 20.9.2, and 21.4.2 and certified-asterisk versions 18.9-cert11 and 20.7-cert2, an AMI user with write=originate may change all configuration files in the /etc/asterisk/ directory. Writing a new extension can be created which performs a system command to achieve RCE as the asterisk service user (typically asterisk). Default parking lot in FreePBX is called "Default lot" on the website interface, however its actually parkedcalls. Tested against Asterisk 19.8.0 and 18.16.0 on Freepbx SNG7-PBX16-64bit-2302-1.

#### **Omada Identity Cross Site Scripting**

Omada Identity versions prior to 15U1 and 14.14 hotfix #309 suffer from a persistent cross site scripting vulnerability.

- Link

\_

" "Mon, 02 Dec 2024

#### Siemens Unlocked JTAG Interface / Buffer Overflow

Various Siemens products suffer from vulnerabilities. There is an unlocked JTAG Interface for Zynq-7000 on SM-2558 and a buffer overflow on the webserver of the SM-2558, CP-2016, and CP-2019 systems.

- Link

\_

#### ABB Cylon Aspect 3.08.00 fileSystemUpdate.php File Upload / Denial Of Service

ABB Cylon Aspect version 3.08.00 suffers from a vulnerability in the fileSystemUpdate.php endpoint of the ABB BEMS controller due to improper handling of uploaded files. The endpoint lacks restrictions on file size and type, allowing attackers to upload excessively large or malicious files. This flaw could be exploited to cause denial of service (DoS) attacks, memory leaks, or buffer overflows,

<sup>&</sup>quot; "Mon, 02 Dec 2024

potentially leading to system crashes or further compromise.

—

" "Mon, 02 Dec 2024

#### ABB Cylon Aspect 3.08.01 mstpstatus.php Information Disclosure

ABB Cylon Aspect version 3.08.01 suffers from an unauthenticated information disclosure vulnerability. An unauthorized attacker can reference the affected page and disclose various BACnet MS/TP statistics running on the device.

- Link

\_

#### ABB Cylon Aspect 3.08.01 diagLateThread.php Information Disclosure

ABB Cylon Aspect version 3.08.01 suffers from an unauthenticated information disclosure vulnerability. An unauthorized attacker can reference the affected page and disclose various protocol thread information running on the device.

- Link

\_

#### AppleAVD AV1\_Syntax::Parse\_Header Out-Of-Bounds Reads

AppleAVD has an issue where a large OBU size in AV1\_Syntax::Parse\_Header reading can lead to out-of-bounds reads.

- Link

\_

#### AppleAVD AV1\_Syntax::f Out-Of-Bounds Reads

AppleAVD has an issue in AV1\_Syntax::f leading to out-of-bounds reads.

- Link

—

#### AppleAVD AV1\_Syntax::Parse\_Header Integer Underflow / Out-Of-Bounds Reads

AppleAVD has an integer underflow in AV1\_Syntax::Parse\_Header that can lead to out-of-bounds reads.

- Link

\_

#### Simple Chat System 1.0 Cross Site Scripting

Simple Chat System version 1.0 suffers from a cross site scripting vulnerability.

- Link

<sup>&</sup>quot; "Mon, 02 Dec 2024

\_

" "Mon, 02 Dec 2024

#### **Russian FSB Cross Site Scripting**

The Russian FSB appears to suffer from a cross site scripting vulnerability. The researchers who discovered it have reported it multiple times to them.

- Link

\_

" "Mon, 02 Dec 2024

### **Laravel 11.0 Cross Site Scripting**

Laravel version 11.0 suffers from a cross site scripting vulnerability.

- Link

\_

" "Mon, 02 Dec 2024

#### Nvidia GeForce 11.0.1.163 Unquoted Service Path

Nvidia GeForce version 11.0.1.163 suffers from an unquoted service path vulnerability.

- Link

\_

" "Mon, 02 Dec 2024

#### Intelligent Security System SecurOS Enterprise 11 Unquoted Service Path

Intelligent Security System SecurOS Enterprise version 11 suffers from an unquoted service path vulnerability.

- Link

\_

" "Wed, 27 Nov 2024

#### ABB Cylon Aspect 3.08.01 vstatConfigurationDownload.php Configuration Download

ABB Cylon Aspect version 3.08.01 suffers from an unauthenticated configuration download vulnerability. This can be exploited to download the CSV DB that contains the configuration mappings information via the VMobileImportExportServlet by directly calling the vstatConfigurationDownload.php script.

- Link

\_

#### Akuvox Smart Intercom/Doorphone ServicesHTTPAPI Improper Access Control

The Akuvox Smart Intercom/Doorphone suffers from an insecure service API access control. The vulnerability in ServicesHTTPAPI endpoint allows users with "User" privileges to modify API access settings and configurations. This improper access control permits privilege escalation, enabling unauthorized access to administrative functionalities. Exploitation of this issue could compromise system integrity and lead to unauthorized system modifications.

<sup>&</sup>quot; "Wed, 27 Nov 2024

#### - Link

\_

" "Fri, 22 Nov 2024

#### **CUPS IPP Attributes LAN Remote Code Execution**

This Metasploit module exploits vulnerabilities in OpenPrinting CUPS, which is running by default on most Linux distributions. The vulnerabilities allow an attacker on the LAN to advertise a malicious printer that triggers remote code execution when a victim sends a print job to the malicious printer. Successful exploitation requires user interaction, but no CUPS services need to be reachable via accessible ports. Code execution occurs in the context of the lp user. Affected versions are cupsbrowsed less than or equal to 2.0.1, libcupsfilters versions 2.1b1 and below, libppd versions 2.1b1 and below, and cups-filters versions 2.0.1 and below.

#### - Link

\_

#### ProjectSend R1605 Unauthenticated Remote Code Execution

This Metasploit module exploits an improper authorization vulnerability in ProjectSend versions r1295 through r1605. The vulnerability allows an unauthenticated attacker to obtain remote code execution by enabling user registration, disabling the whitelist of allowed file extensions, and uploading a malicious PHP file to the server.

#### - Link

\_

#### needrestart Local Privilege Escalation

Qualys discovered that needrestart suffers from multiple local privilege escalation vulnerabilities that allow for root access from an unprivileged user.

#### - Link

\_

#### fronsetia 1.1 Cross Site Scripting

fronsetia version 1.1 suffers from a cross site scripting vulnerability.

- Link

\_

#### fronsetia 1.1 XML Injection

fronsetia version 1.1 suffers from an XML external entity injection vulnerability.

- Link

\_

<sup>&</sup>quot; "Fri, 22 Nov 2024

#### PowerVR psProcessHandleBase Reuse

PowerVR has an issue where PVRSRVAcquireProcessHandleBase() can cause psProcessHandleBase reuse when PIDs are reused.

- Link

\_

" "Fri, 22 Nov 2024

#### **Linux 6.6 Race Condition**

A security-relevant race between mremap() and THP code has been discovered. Reaching the buggy code typically requires the ability to create unprivileged namespaces. The bug leads to installing physical address 0 as a page table, which is likely exploitable in several ways: For example, triggering the bug in multiple processes can probably lead to unintended page table sharing, which probably can lead to stale TLB entries pointing to freed pages.
