1 Editorial

Guten Morgen,

willkommen zum Cybersecurity Morgenreport von Cyberwald, Ihrem täglichen Begleiter in der Welt der IT-Sicherheit. Als nicht-kommerzielles Projekt ist es unser Anliegen, Awareness und Wissen rund um das Thema Cybersecurity kostenlos zu vermitteln. In der heutigen digitalen Welt ist es für Unternehmen von entscheidender Bedeutung, sich über aktuelle Sicherheitsrisiken zeitnah zu informieren. Cyberbedrohungen entwickeln sich ständig weiter und können erhebliche Schäden verursachen, wenn sie nicht rechtzeitig erkannt und abgewehrt werden. Durch die Nutzung aktueller Informationen können Unternehmen ihre IT-Sicherheitsmaßnahmen stärken und sich effektiv gegen diese Bedrohungen schützen.

Unser Ziel ist es, Ihnen, den IT-Verantwortlichen, einen kompakten und leicht verständlichen Überblick über aktuelle Sicherheitsrisiken zu geben. Wir präsentieren Ihnen täglich Sicherheitsmeldungen und Berichte über neue Sicherheitslücken, die Ihre Systeme und Daten bedrohen könnten.

Darüber hinaus listen wir aktuelle Cyberangriffe und Ransomware-Vorfälle auf. Dies ist von besonderer Bedeutung, da es Unternehmen ermöglicht, sich auf mögliche Supply-Chain- und Phishing-Angriffe vorzubereiten. Durch das Verständnis der Methoden und Taktiken, die von Cyberkriminellen verwendet werden, können Unternehmen ihre Verteidigungsmaßnahmen entsprechend anpassen und stärken.

Für den Cybersecurity Morgenreport greifen wir automatisiert auf öffentliche Informationsquellen zu, filtern und sortieren diese Informationen, um sie Ihnen in einer übersichtlichen Form zur Verfügung zu stellen. Wir bemühen uns, die Inhalte so verständlich wie möglich zu gestalten und vorzugsweise vollständig in deutscher Sprache wiederzugeben. Bei Bedarf übersetzen wir die öffentlichen Informationen und fassen sie durch eine KI zusammen.

Der Cybersecurity Morgenreport ist ein dynamisches Projekt. Wir passen und erweitern unsere Inhalte ständig, um Ihnen die relevantesten und aktuellsten Informationen zu liefern. Derzeit befinden wir uns im Alpha-Stadium des Projekts und freuen uns über Ihr Feedback und Ihre Anregungen.

Wir hoffen, dass der Cybersecurity Morgenreport Ihnen hilft, Ihre IT-Sicherheitsmaßnahmen zu verbessern und Ihre Systeme vor den ständig wechselnden Bedrohungen zu schützen. Bleiben Sie sicher und informiert mit dem Cybersecurity Morgenreport von Cyberwald.

Ihr Cyberwald-Team

2 Security-News

2.1 Heise - Security-Alert

Jetzt patchen! Ransomware-Attacken auf Server mit CyberPanel beobachtet

Angreifer nutzen kritische Schwachstellen in Servern aus, auf denen CyberPanel installiert ist. Eine abgesicherte Version ist verfügbar.

_

Qnap schließt NAS-Sicherheitslücke aus Hackerwettbewerb

NAS-Modelle von Qnap mit der Backupsoftware HBS 3 Hybrid Backup Sync sind angreifbar. Eine neue Version schließt eine kritische Schwachstelle.

- Link

_

Google Chrome: Kritische Sicherheitslücke gestopft

Das wöchentliche Update für Googles Chrome-Webbrowser schließt dieses Mal eine als kritisches Risiko eingestufte Sicherheitslücke.

- Link

_

Sicherheitsupdates: Firefox und Thunderbird gegen Schadcode-Attacken gerüstet

Angreifer können die Browser Firefox und Firefox ESR und den Mailclient Thunderbird unter anderem abstürzen lassen.

- Link

_

IBM App Connect Enterprise: Angreifer können Anmeldung umgehen

Die Entwickler von IBM haben zwei Sicherheitslücken in App Connect Enterprise Certified Container geschlossen. Attacken sind aber nicht ohne Weiteres möglich.

- Link

_

VMware Tanzu Spring Security: Umgehung von Autorisierungsregeln möglich

In VMware Tanzu Spring Security klafft eine kritische Sicherheitslücke, die Angreifern die Umgehung von Autorisierungsregeln ermöglicht.

_

Nvidia: Rechteausweitung durch Sicherheitslücken in Grafiktreiber möglich

Nvidia warnt vor mehreren Sicherheitslücken in den Grafiktreibern, die etwa das Ausweiten der Rechte ermöglichen. Updates stehen bereit.

- Link

_

Cisco meldet mehr als 35 Sicherheitslücken in Firewall-Produkten

Ciscos ASA, Firepower und Secure Firewall Management Center weisen teils kritische Sicherheitslücken auf. Mehr als 35 schließen nun verfügbare Updates.

- Link

_

Angreifer missbrauchen Sharepoint-Sicherheitsleck für Codeschmuggel

Die IT-Sicherheitsbehörde CISA warnt vor aktuellen Angriffen auf eine Sharepoint-Schwachstelle. Sie ermöglicht Codeschmuggel.

- Link

_

Fortinet bestätigt kritische angegriffene Sicherheitslücke in Fortimanager

Fortinet hat eine kritische Sicherheitslücke in Fortimanager bestätigt, die bereits angegriffen wird. Updates stehen seit Kurzem bereit.

- Link

_

3 Sicherheitslücken

Eine Sicherheitslücke oder Schwachstelle ist ein Fehler in einer Software oder Hardware, der es einem Angreifer ermöglicht, in ein Computersystem einzudringen und Schaden anzurichten. Diese Lücke stellt eine Bedrohung für die Sicherheit des Systems dar, da sie ausgenutzt werden kann, um das System zu kompromittieren. Sicherheitslücken entstehen oft durch unzureichenden Schutz des Computers vor Netzwerkangriffen, zum Beispiel durch fehlende Firewall oder andere Sicherheitssoftware. Auch Programmierfehler im Betriebssystem, Webbrowser oder anderen Anwendungen können Sicherheitslücken verursachen. Bekannte Sicherheitslücken sollten daher so schnell wie möglich durch das Einspielen eines Patches geschlossen werden, um die Angriffsfläche der IT-Systeme zu verringern.

3.1 EPSS

Das Exploit Prediction Scoring System wird für eine bekannte Software-Sicherheitslücke / CVE auf einer Skala von 0 (0%) bis 1 (100%) angegeben und soll die Wahrscheinlichkeit für das Auftreten eines Exploits in naher Zukunft darstellen. Ein höherer Wert bedeutet eine höhere Wahrscheinlichkeit, dass eine Schwachstelle in naher Zukunft ausgenutzt wird. EPSS kann auch als Rahmen für die Priorisierung von Schwachstellen unter Verwendung einer Kombination von Metriken betrachtet werden.

Es soll Unternehmen dabei helfen, ihre Ressourcen effizienter zu verteilen und alle relevanten Cyber-Risiken zu minimieren.

3.1.1 CVEs mit hoher Exploit-Wahrscheinlichkeit

4 Aktiv ausgenutzte Sicherheitslücken

4.1 Exploits der letzten 5 Tage

"Thu, 31 Oct 2024

WordPress Automatic 3.92.0 Path Traversal / Server-Side Request Forgery

WordPress Automatic plugin versions 3.92.0 and below proof of concept exploit that demonstrates path traversal and server-side request forgery vulnerabilities.

- Link

_

" "Thu, 31 Oct 2024

Qualitor 8.24 Server-Side Request Forgery

Qualitor versions 8.24 and below suffer from an unauthenticated server-side request forgery vulnerability.

- Link

_

" "Thu, 31 Oct 2024

CyberPanel Command Injection

Proof of concept exploit for a command injection vulnerability in CyberPanel. This vulnerability enables unauthenticated attackers to inject and execute arbitrary commands on vulnerable servers by sending crafted OPTIONS HTTP requests to /dns/getresetstatus and /ftp/getresetstatus endpoints, potentially leading to full system compromise. Versions prior to 1c0c6cb appear to be affected.

- Link

_

" "Thu, 31 Oct 2024

Skyhigh Client Proxy Policy Bypass

Proof of concept code for a flaw where a malicious insider can bypass the existing policy of Skyhigh Client Proxy without a valid release code.

- Link

_

" "Wed, 30 Oct 2024

WordPress WP-Automatic SQL Injection

This Metasploit module exploits an unauthenticated SQL injection vulnerability in the WordPress wp-automatic plugin versions prior to 3.92.1 to achieve remote code execution. The vulnerability allows the attacker to inject and execute arbitrary SQL commands, which can be used to create a malicious administrator account. The password for the new account is hashed using MD5. Once the administrator account is created, the attacker can upload and execute a malicious plugin, leading to full control over the WordPress site.

ABB Cylon Aspect 3.08.01 jsonProxy.php Username Enumeration

ABB Cylon Aspect version 3.08.01 is vulnerable to username enumeration in the jsonProxy.php endpoint. An unauthenticated attacker can interact with the UserManager servlet to enumerate valid usernames on the system. Since jsonProxy.php proxies requests to internal services without requiring authentication, attackers can gain unauthorized insights into valid usernames.

- Link

_

ABB Cylon Aspect 3.08.01 jsonProxy.php Information Disclosure

ABB Cylon Aspect version 3.08.01 is vulnerable to unauthorized information disclosure in the jsonProxy.php endpoint. An unauthenticated attacker can retrieve sensitive system information, including system time, uptime, memory usage, and network load statistics. The jsonProxy.php endpoint proxies these requests to internal services without requiring authentication, allowing attackers to obtain detailed system status data, which could aid in further attacks by revealing operational characteristics and resource utilization.

- Link

_

ABB Cylon Aspect 3.08.01 jsonProxy.php Unauthenticated Remote SSH Service Control

ABB Cylon Aspect version 3.08.01 is vulnerable to unauthorized SSH service configuration changes via the jsonProxy.php endpoint. An unauthenticated attacker can enable or disable the SSH service on the server by accessing the FTControlServlet with the sshenable parameter. The jsonProxy.php script proxies requests to localhost without enforcing authentication, allowing attackers to modify SSH settings and potentially gain further unauthorized access to the system.

- Link

_

ABB Cylon Aspect 3.08.01 jsonProxy.php Denial Of Service

ABB Cylon Aspect version 3.08.01 is vulnerable to an unauthenticated denial of service attack in the jsonProxy.php endpoint. An attacker can remotely restart the main Java server by accessing the FTControlServlet with the restart parameter. The endpoint proxies requests to localhost without requiring authentication, enabling attackers to disrupt system availability by repeatedly triggering server restarts.

ABB Cylon Aspect 3.08.01 jsonProxy.php Unauthenticated Project Download

ABB Cylon Aspect version 3.08.01 is vulnerable to an unauthorized project file disclosure in jsonProxy.php. An unauthenticated remote attacker can issue a GET request abusing the DownloadProject servlet to download sensitive project files. The jsonProxy.php script bypasses authentication by proxying requests to localhost (AspectFT Automation Application Server), granting remote attackers unauthorized access to internal Java servlets. This exposes potentially sensitive project data and configuration details without requiring authentication.

- Link

_

" "Wed, 30 Oct 2024

ABB Cylon Aspect 3.08.01 jsonProxy.php Servlet Inclusion Authentication Bypass

ABB Cylon Aspect version 3.08.01 is vulnerable to remote, arbitrary servlet inclusion. The jsonProxy.php endpoint allows unauthenticated remote attackers to access internal services by proxying requests to localhost. This results in an authentication bypass, enabling attackers to interact with multiple java servlets without authorization, potentially exposing sensitive system functions and information.

- Link

_

" "Wed, 30 Oct 2024

ABB Cylon Aspect 3.08.01 jsonProxy.php Unauthenticated Credential Disclosure

ABB Cylon Aspect version 3.08.01 allows an unauthenticated attacker to disclose credentials in plain-text.

- Link

_

" "Wed, 30 Oct 2024

ABB Cylon Aspect 3.08.01 jsonProxy.php Cross Site Scripting

ABB Cylon Aspect version 3.08.01 suffers from an unauthenticated reflected cross-site scripting vulnerability. Input passed to the GET parameters query and application is not properly sanitized before being returned to the user. This can be exploited to execute arbitrary HTML/JS code in a user's browser session in context of an affected site.

- Link

Vendure Arbitrary File Read / Denial Of Service

Vendure is an open-source headless commerce platform. Prior to versions 3.0.5 and 2.3.3, a vulnerability in Vendure's asset server plugin allows an attacker to craft a request which is able to traverse the server file system and retrieve the contents of arbitrary files, including sensitive data such as configuration files, environment variables, and other critical data stored on the server. In the same code path is an additional vector for crashing the server via a malformed URI. Patches are available in versions 3.0.5 and 2.3.3. Some workarounds are also available. One may use object storage rather than the local file system, e.g. MinIO or S3, or define middleware which detects and blocks requests with urls containing /../.

Helakuru 1.1 DLL Hijacking

Helakuru version 1.1 suffers from a dll hijacking vulnerability.

- Link

_

" "Thu, 24 Oct 2024

Grafana Remote Code Execution

This repository contains a Python script that exploits a remote code execution vulnerability in Grafana's SQL Expressions feature. By leveraging insufficient input sanitization, this exploit allows an attacker to execute arbitrary shell commands on the server. This is made possible through the shellfs community extension, which can be installed and loaded by an attacker to facilitate command execution.
