1 Editorial

Guten Morgen,

willkommen zum Cybersecurity Morgenreport von Cyberwald, Ihrem täglichen Begleiter in der Welt der IT-Sicherheit. Als nicht-kommerzielles Projekt ist es unser Anliegen, Awareness und Wissen rund um das Thema Cybersecurity kostenlos zu vermitteln. In der heutigen digitalen Welt ist es für Unternehmen von entscheidender Bedeutung, sich über aktuelle Sicherheitsrisiken zeitnah zu informieren. Cyberbedrohungen entwickeln sich ständig weiter und können erhebliche Schäden verursachen, wenn sie nicht rechtzeitig erkannt und abgewehrt werden. Durch die Nutzung aktueller Informationen können Unternehmen ihre IT-Sicherheitsmaßnahmen stärken und sich effektiv gegen diese Bedrohungen schützen.

Unser Ziel ist es, Ihnen, den IT-Verantwortlichen, einen kompakten und leicht verständlichen Überblick über aktuelle Sicherheitsrisiken zu geben. Wir präsentieren Ihnen täglich Sicherheitsmeldungen und Berichte über neue Sicherheitslücken, die Ihre Systeme und Daten bedrohen könnten.

Darüber hinaus listen wir aktuelle Cyberangriffe und Ransomware-Vorfälle auf. Dies ist von besonderer Bedeutung, da es Unternehmen ermöglicht, sich auf mögliche Supply-Chain- und Phishing-Angriffe vorzubereiten. Durch das Verständnis der Methoden und Taktiken, die von Cyberkriminellen verwendet werden, können Unternehmen ihre Verteidigungsmaßnahmen entsprechend anpassen und stärken.

Für den Cybersecurity Morgenreport greifen wir automatisiert auf öffentliche Informationsquellen zu, filtern und sortieren diese Informationen, um sie Ihnen in einer übersichtlichen Form zur Verfügung zu stellen. Wir bemühen uns, die Inhalte so verständlich wie möglich zu gestalten und vorzugsweise vollständig in deutscher Sprache wiederzugeben. Bei Bedarf übersetzen wir die öffentlichen Informationen und fassen sie durch eine KI zusammen.

Der Cybersecurity Morgenreport ist ein dynamisches Projekt. Wir passen und erweitern unsere Inhalte ständig, um Ihnen die relevantesten und aktuellsten Informationen zu liefern. Derzeit befinden wir uns im Alpha-Stadium des Projekts und freuen uns über Ihr Feedback und Ihre Anregungen.

Wir hoffen, dass der Cybersecurity Morgenreport Ihnen hilft, Ihre IT-Sicherheitsmaßnahmen zu verbessern und Ihre Systeme vor den ständig wechselnden Bedrohungen zu schützen. Bleiben Sie sicher und informiert mit dem Cybersecurity Morgenreport von Cyberwald.

Ihr Cyberwald-Team

2 Security-News

2.1 Heise - Security-Alert

Palo-Alto-Firewalls: Mehr Angriffe und Proofs-of-Concept aufgetaucht

Für die root-Zugriffslücke in Firewalls von Palo Alto Networks sind Proof-of-Concept-Exploits aufgetaucht. Angriffe nehmen zu.

_

3 Sicherheitslücken

Eine Sicherheitslücke oder Schwachstelle ist ein Fehler in einer Software oder Hardware, der es einem Angreifer ermöglicht, in ein Computersystem einzudringen und Schaden anzurichten. Diese Lücke stellt eine Bedrohung für die Sicherheit des Systems dar, da sie ausgenutzt werden kann, um das System zu kompromittieren. Sicherheitslücken entstehen oft durch unzureichenden Schutz des Computers vor Netzwerkangriffen, zum Beispiel durch fehlende Firewall oder andere Sicherheitssoftware. Auch Programmierfehler im Betriebssystem, Webbrowser oder anderen Anwendungen können Sicherheitslücken verursachen. Bekannte Sicherheitslücken sollten daher so schnell wie möglich durch das Einspielen eines Patches geschlossen werden, um die Angriffsfläche der IT-Systeme zu verringern.

3.1 EPSS

Das Exploit Prediction Scoring System wird für eine bekannte Software-Sicherheitslücke / CVE auf einer Skala von 0 (0%) bis 1 (100%) angegeben und soll die Wahrscheinlichkeit für das Auftreten eines Exploits in naher Zukunft darstellen. Ein höherer Wert bedeutet eine höhere Wahrscheinlichkeit, dass eine Schwachstelle in naher Zukunft ausgenutzt wird. EPSS kann auch als Rahmen für die Priorisierung von Schwachstellen unter Verwendung einer Kombination von Metriken betrachtet werden.

Es soll Unternehmen dabei helfen, ihre Ressourcen effizienter zu verteilen und alle relevanten Cyber-Risiken zu minimieren.

3.1.1 CVEs mit hoher Exploit-Wahrscheinlichkeit

_

Wed, 17 Apr 2024

[NEU] [hoch] FreeRDP: Mehrere Schwachstellen ermöglichen nicht spezifizierten Angriff

Ein Angreifer kann mehrere Schwachstellen in FreeRDP ausnutzen, um einen nicht näher spezifizierten Angriff durchzuführen.

- Link

_

Wed, 17 Apr 2024

[NEU] [hoch] Broadcom Brocade SANnav: Mehrere Schwachstellen

Ein Angreifer kann mehrere Schwachstellen in Broadcom Brocade SANnav ausnutzen, um einen Denial of Service Angriff durchzuführen oder vertrauliche Informationen offenlegen.

- Link

_

Wed, 17 Apr 2024

[NEU] [hoch] Rockwell Automation ControlLogix: Schwachstelle ermöglicht Denial of Service

Ein entfernter, anonymer Angreifer kann eine Schwachstelle in Rockwell Automation ControlLogix ausnutzen, um einen Denial of Service Angriff durchzuführen.

- Link

_

Wed, 17 Apr 2024

[NEU] [hoch] Red Hat Enterprise Linux (shim): Mehrere Schwachstellen

Ein lokaler Angreifer kann mehrere Schwachstellen in Red Hat Enterprise Linux in "shim" ausnutzen, um einen Denial-of-Service-Zustand zu erzeugen, vertrauliche Informationen offenzulegen oder beliebigen Code auszuführen.

- Link

_

Wed, 17 Apr 2024

[NEU] [hoch] Ivanti Avalanche: Mehrere Schwachstellen

Ein entfernter authentifizierter oder anonymer Angreifer kann mehrere Schwachstellen in Ivanti Avalanche ausnutzen, um beliebigen Code im Kontext des Dienstes auszuführen, einen Denial-of-Service-Zustand zu verursachen oder vertrauliche Informationen offenzulegen.

- Link

_

Wed, 17 Apr 2024

[NEU] [hoch] Oracle Fusion Middleware: Mehrere Schwachstellen

Ein entfernter, anonymer Angreifer kann mehrere Schwachstellen in Oracle Fusion Middleware ausnutzen, um die Vertraulichkeit, Integrität und Verfügbarkeit zu gefährden.

- Link

_

Wed, 17 Apr 2024

[NEU] [hoch] Oracle Insurance Applications: Mehrere Schwachstellen

Ein Angreifer kann mehrere Schwachstellen in Oracle Insurance Applications ausnutzen, um die Vertraulichkeit, Integrität und Verfügbarkeit zu gefährden.

- Link

_

Wed, 17 Apr 2024

[NEU] [hoch] Oracle Java SE: Mehrere Schwachstellen

Ein entfernter, anonymer Angreifer kann mehrere Schwachstellen in Oracle Java SE ausnutzen, um die Vertraulichkeit, Integrität und Verfügbarkeit zu gefährden.

- Link

Wed, 17 Apr 2024

[NEU] [hoch] Oracle PeopleSoft: Mehrere Schwachstellen

Ein Angreifer kann mehrere Schwachstellen in Oracle PeopleSoft ausnutzen, um die Vertraulichkeit, Integrität und Verfügbarkeit zu gefährden.

- Link

__

Wed, 17 Apr 2024

[NEU] [hoch] Oracle Retail Applications: Mehrere Schwachstellen

Ein Angreifer kann mehrere Schwachstellen in Oracle Retail Applications ausnutzen, um die Vertraulichkeit, Integrität und Verfügbarkeit zu gefährden.

- Link

_

Wed, 17 Apr 2024

[NEU] [hoch] Oracle Supply Chain: Mehrere Schwachstellen

Ein Angreifer kann mehrere Schwachstellen in Oracle Supply Chain ausnutzen, um die Vertraulichkeit, Integrität und Verfügbarkeit zu gefährden.

- Link

_

Wed, 17 Apr 2024

[NEU] [hoch] Oracle Systems: Mehrere Schwachstellen

Ein Angreifer kann mehrere Schwachstellen in Oracle Systems ausnutzen, um die Vertraulichkeit, Integrität und Verfügbarkeit zu gefährden.

- Link

_

Wed, 17 Apr 2024

[NEU] [hoch] Oracle Virtualization: Mehrere Schwachstellen

Ein entfernter, anonymer Angreifer kann mehrere Schwachstellen in Oracle Virtualization ausnutzen, um die Vertraulichkeit, Integrität und Verfügbarkeit zu gefährden.

- Link

_

Wed, 17 Apr 2024

[NEU] [hoch] less: Schwachstelle ermöglicht Codeausführung

Ein lokaler Angreifer kann eine Schwachstelle in less ausnutzen, um beliebigen Programmcode auszuführen.

- Link

_

Wed, 17 Apr 2024

[NEU] [kritisch] PaloAlto Networks PAN-OS: Schwachstelle ermöglicht Ausführen von beliebigem Programmcode mit Administratorrechten

Ein entfernter, anonymer Angreifer kann eine Schwachstelle in PaloAlto Networks PAN-OS ausnutzen,

um beliebigen Programmcode mit den Rechten des Dienstes auszuführen.

pgAdmin 8.3 Remote Code Execution

pgAdmin versions 8.3 and below have a path traversal vulnerability within their session management logic that can allow a pickled file to be loaded from an arbitrary location. This can be used to load a malicious, serialized Python object to execute code within the context of the target application. This exploit supports two techniques by which the payload can be loaded, depending on whether or not credentials are specified. If valid credentials are provided, Metasploit will login to pgAdmin and upload a payload object using pgAdmin's file management plugin. Once uploaded, this payload is executed via the path traversal before being deleted using the file management plugin. This technique works for both Linux and Windows targets. If no credentials are provided, Metasploit will start an SMB server and attempt to trigger loading the payload via a UNC path. This technique only works for Windows targets. For Windows 10 v1709 (Redstone 3) and later, it also requires that insecure outbound guest access be enabled. Tested on pgAdmin 8.3 on Linux, 7.7 on Linux, 7.0 on

[&]quot; "Wed, 17 Apr 2024

[&]quot; "Wed, 17 Apr 2024

Linux, and 8.3 on Windows. The file management plugin underwent changes in the 6.x versions and therefore, pgAdmin versions below 7.0 cannot utilize the authenticated technique whereby a payload is uploaded.

Amazon AWS Glue Database Password Disclosure

The password of database connections in AWS Glue is loaded into the website when a connection's edit page is requested. Principals with appropriate permissions can read the password. This behavior also increases the risk that database passwords will be intercepted by an attacker during transmission in the server response. Many types of vulnerabilities, such as broken access controls, cross site scripting and weaknesses in session handling, could enable an attacker to leverage this behavior to retrieve the passwords.

CrushFTP Remote Code Execution

This Metasploit exploit module leverages an improperly controlled modification of dynamically-determined object attributes vulnerability (CVE-2023-43177) to achieve unauthenticated remote code execution. This affects CrushFTP versions prior to 10.5.1. It is possible to set some user's session properties by sending an HTTP request with specially crafted Header key-value pairs. This enables an unauthenticated attacker to access files anywhere on the server file system and steal the session cookies of valid authenticated users. The attack consists in hijacking a user's session and escalates privileges to obtain full control of the target. Remote code execution is obtained by abusing the dynamic SQL driver loading and configuration testing feature.

_

" "Fri, 12 Apr 2024

Ray OS 2.6.3 Command Injection

The Ray Project dashboard contains a CPU profiling page, and the format parameter is not validated before being inserted into a system command executed in a shell, allowing for arbitrary command execution. If the system is configured to allow passwordless sudo (a setup some Ray configurations require) this will result in a root shell being returned to the user. If not configured, a user level shell will be returned. Versions 2.6.3 and below are affected.
